## **ARCHAEOLOGICAL RESOURCE PROTECTION IN SAN LUIS OBISPO COUNTY**

The California Coastal Act of 1976 (Public Resources Code Section 30244) and the California Environmental Quality Act (CEQA) of 1970 (Public Resources Code Sections 21000 et seq.) contain policies that require reasonable mitigation of potential significant impacts upon important examples of historic and prehistoric remains found on public and private lands.

Ninety-five percent of California's cultural history is contained in the archaeological remains of the prehistoric culture. The archaeological sites representing these thousands of years of culture are among the most fragile, nonrenewable resources in the state. Detailed study of archaeological sites is the only method of gaining knowledge and understanding of prehistoric cultures. In addition, many of the archaeological sites, the artifacts and remains therein are sacred and an important part of the heritage, religion and culture of the Native American Community.

The Development of property should be accompanied with a rational and respectful concern for the protection of California's cultural resources. This concern should be incorporated in the procedures through which the property is developed. There are several important concepts and methods to remember when developing property, be it for a single family residence, a subdivision or construction of an industrial complex.

Some areas are more likely than others to contain archaeological resources. Level to gently rolling areas near the coast or along water courses are more likely to contain archaeological sites than moderate to steeply sloping areas away from a surface water source.

The identification of an archaeological site on a property does not mean that development cannot occur on the property. It usually does mean that certain mitigation measures, such as bringing in additional fill material or relocating building areas away from the site, must be implemented for successful completion of the development.

It is best to identify potential archaeological sites as early in the planning process for a project as possible. Early identification of an archaeological site is advantageous to the applicant in that mitigation measures can be built right into the project proposal. For information about procedures for identifying archaeological sites, contact the County Environmental Division.

If an archaeological site is discovered during the construction of the project, stop work on the project immediately and contact the Environmental Division. This office will work with all parties concerned to mitigate impacts upon the archaeological site in an expeditious and effective manner.

It is important to note that failure to cease work on the project or attempting to hide the find is in violation of the Land Use Ordinance (LUO22.05.140) and Coastal Zone Land Use Ordinance (CSZLUO23.05.140) and often results in a long-term delay of your project, fines and costly detailed studies of the site to be paid for by the applicant.

If you have any questions regarding archaeology and how it affects your proposal, contact: Environmental Division, Department of Planning & Building, Room 310, County Government Center, San Luis Obispo, CA 93408-2040, (805) 781-5600.
